

WEEK 18: EMAIL SECURITY AND PHISHING

1. What is Phishing Attack?

Phishing is a cyberattack where fake emails or websites trick users into sharing sensitive information.

2. Email Scams

Email scams are fraudulent messages designed to steal money, passwords, or personal information.

3. Spam emails

Spam emails are unwanted messages often used for advertisements or spreading malicious links.

4. Safe email Practices

- Users should avoid unknown links
- Users should verify senders
- Never share passwords through email.
